## Key Concept and Vocabulary

A square root of a number is a number that when multiplied by itself, equals the given number. Every positive number has a positive and a negative square root. A perfect square is a number with integers as its square roots.

Positive Square Root: $\sqrt{9}=3$
Negative Square Root: $-\sqrt{9}=-3$
Both Square Roots: $\pm \sqrt{9}= \pm 3$

## Skill Examples

1. $\sqrt{36}$
$\therefore$ Because $6^{2}=36, \sqrt{36}=\sqrt{6^{2}}=6$.
2. $-\sqrt{144}$
$\therefore \quad$ Because $12^{2}=144$,

$$
-\sqrt{144}=-\sqrt{12^{2}}=-12
$$

3. $\pm \sqrt{3.24}$
$\therefore \quad$ Because $1.8^{2}=3.24$, $\pm \sqrt{3.24}= \pm \sqrt{1.8^{2}}=1.8$ and -1.8 .

## Application Example

4. The area of a square table top is 256 square inches. What is the length of one side of the table top?

$$
\begin{aligned}
A & =s^{2} \\
256 & =s^{2} \\
\sqrt{256} & =\sqrt{s^{2}} \\
16 & =s
\end{aligned}
$$

$\therefore$ The length of one side of the table top is 16 inches.
