$\qquad$

## Key Concept and Vocabulary

A number is written in scientific notation when it is represented as the product of a factor and a power of 10 . The factor must be at least 1 and less than 10 .

Writing Numbers in Standard Form

When writing a number from scientific notation to standard form, the absolute value of the exponent tells you how many places to move the decimal point.

## Negative exponent

Move the decimal point to the left.

$$
6.1 \times 10^{-3}=0.0061
$$

## Positive exponent

Move the decimal point to the right.

$$
2.75 \times 10^{5}=\underbrace{275,000}_{5}
$$

## Writing Numbers in Scientific Notation

Step 1: Move the decimal point to the right of the first nonzero digit.
Step 2: Count the number of places you moved the decimal point. This determines the exponent of the power of 10 .

## Number greater than or equal to 10

Use a positive exponent when you move the decimal point to the left.

$$
3400=3.4 \times 10^{3}
$$

## Number between 0 and 1

Use a negative exponent when you move the decimal point to the right.

$$
0.00018=1.8 \times 10^{-4}
$$

## Skill Examples

1. $1.66 \times 10^{-5}=\underbrace{0.0000166}_{5}$
2. $3.1 \times 10^{6}=3, \underbrace{100,000}_{6}$
3. $\underbrace{0.033}_{2}=3.3 \times 10^{-2}$
4. $2400=2.4 \times 10^{3}$

## PRACTICE MAKES PURR-FECT ${ }^{\text {" }}$

## Write the number in standard form.

$\qquad$
5. $9.6 \times 10^{7}=$
6. $2 \times 10^{-6}=$ $\qquad$
7. $7.875 \times 10^{4}=$ $\qquad$ 8. $4.53 \times 10^{-4}=$ $\qquad$
9. $8.9 \times 10^{-7}=$ $\qquad$ 10. $5.16 \times 10^{8}=$ $\qquad$
Write the number in scientific notation.
11. $80,000,000=$ $\qquad$ 12. $0.00815=$ $\qquad$
13. $8,135,000,000=$ $\qquad$ 14. $0.000051=$ $\qquad$
15. $0.00000009=$ $\qquad$ 16. $1,784,000=$ $\qquad$
