## Key Concept and Vocabulary

The sum $S$ of the angle measures of a polygon with $n$ sides is

In a regular polygon, all of the sides are congruent and all of the angles

$$
S=(n-2) \cdot 180^{\circ} .
$$ are congruent.

## Skill Example

1. Find the sum of the angle measures of the polygon.
The polygon has 6 sides.

$$
\begin{aligned}
S & =(n-2) \cdot 180^{\circ} \\
& =(6-2) \cdot 180^{\circ} \\
& =4 \cdot 180^{\circ} \\
& =720^{\circ}
\end{aligned}
$$

## Application Example

2. Find the value of $x$ for the polygon in Exercise 1.
From Exercise 1, the sum of the angle measures is $720^{\circ}$. Write and solve an equation.

$$
\begin{aligned}
132+124+116+100+135+x & =720 \\
607+x & =720 \\
x & =113
\end{aligned}
$$

$\therefore$ The sum of the angle measures is $720^{\circ}$.
